

How will EMSA assist to make the Med SECA a success?

Frederic Hebert
Head of Unit
Sustainability
Department of Sustainability and Technical Assistance

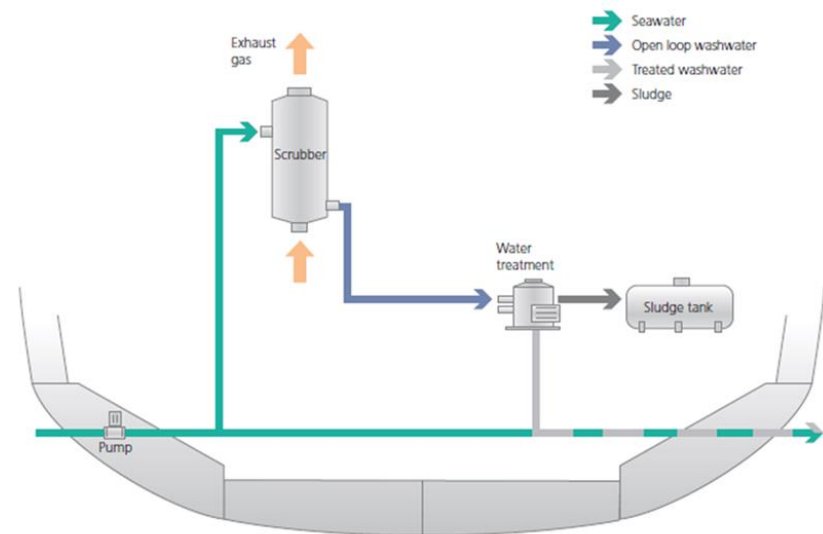

Copenhagen, 22 May 2023

A “success story”

- committed to international Regulation
- a unified legal text for all Eu MS
- supported by an enforcement tool,
- assisted with regular training and guidance
- and operational assistance to EU MS and neighbouring countries

- **OMI: Supporting the Commission in the technical discussions on:**
 - MARPOL annex VI**
 - **Mediterranean SECA**
 - **EGCS discussions**
 - **Possible Atlantic SECA**

Directive 2016/802

The (current) ultimate stage of an EU legislation which started shortly after the adoption of Annex VI in order to address air pollution

It transposes in EU law the limits for SECA and non SECA areas and, with the Commission implementing Decision, sets up a robust implementation framework, looking at the whole chain from suppliers to on-board use,

This is a collaborative work with MS through the Sulphur Committee, where MS share experience on the implementation and propose modification to THETIS EU

Visit to 23 Ms and NO and IS from 2016 to 2022 to check the correct implementation of the Sulphur Directive

More than 200 findings established during the visits

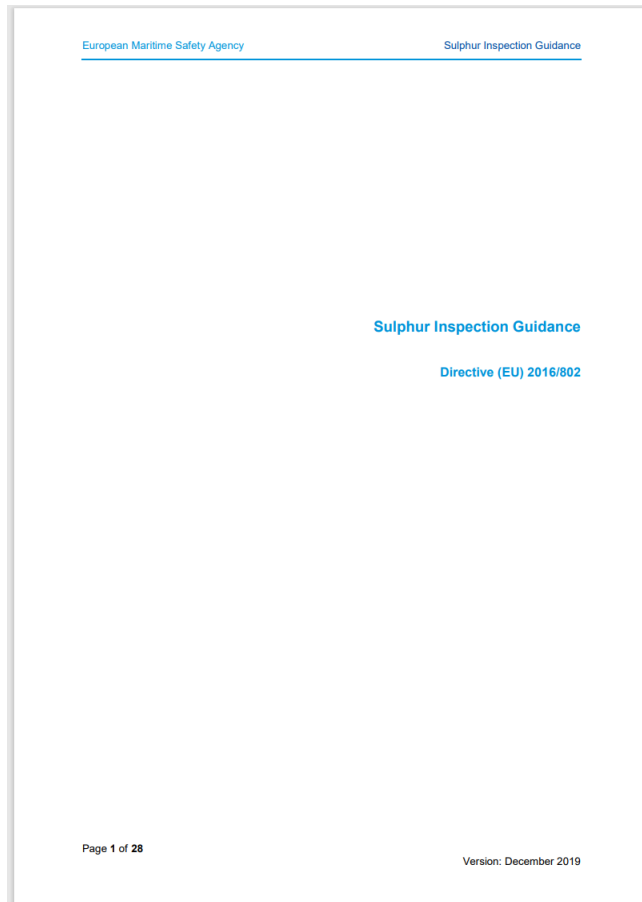

- Verification of the Implementation of relevant provisions of the Sulphur Directive (including allocated resources).
- Identification of points for **collaborative improvement in implementation**
- Operational/Inspective activity of different MSs.
- Monitoring of marine fuel suppliers
- Trial and Approval of Abatement Methods.
- Penalties and Sanctions system implemented.
- Support to Harmonized implementation

- **Launched in 2015 as a tool for the sulphur inspection reporting**
- **Member States have agreed, on voluntary basis, to use THETIS-EU**
- **More than 80.000 Inspections reported since 2015**
- **Include a Risk targeting mechanism:**
 - **prioritisation inspections of ships for which active alerts recorded in THETIS-EU (most of them from RPAS data centre)**
 - **prioritisation scheme the outcome of risk-based parameters developed in THETIS-EU by EMSA, which take into account the following elements: ships' characteristics, active alerts and historical inspection data.**

- **EMSA is delivering trainings to Sulphur inspectors every year since 2015**
- **More than 200 officials trained.**
- **In 2017, 2018 and 2019 a mock inspection/visit was carried out on board a ship with scrubbers in the Lisbon Port.**
- **In 2020 and 2021 the training was delivered on line.**
- **Since 2022 the training has been delivered under the new concept of the EMSA academy:**
 - Same course but divided in synchronous and asynchronous sessions
 - Individual work
 - Three days workshop in EMSA

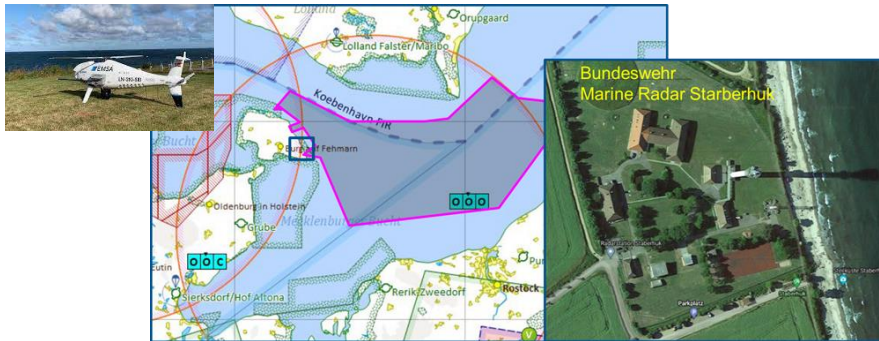

Sulphur Inspection Guidance v.2019

- Guidance for a harmonised approach to the inspection of ships,
- Identification of non-compliances and applying control procedures for the enforcement of Sulphur Directive.
- Emission Abatement Methods
- Best Practice for Fuel Sampling
- Structure procedure for inspection

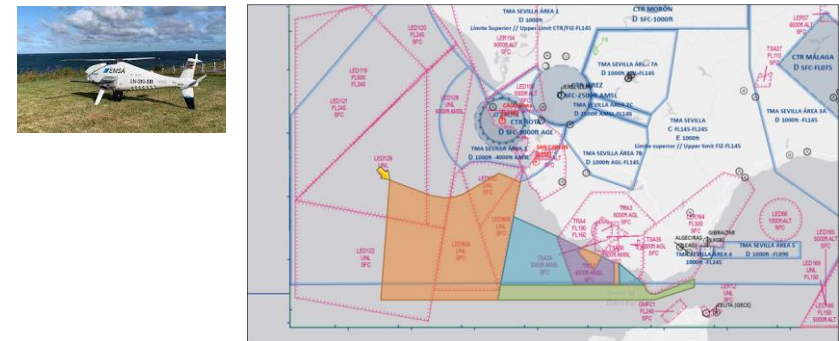

Operational assistance to MS: RPAS Monitoring - Deployments in 2022

Germany (Baltic Sea) from 20/4 for 3 months

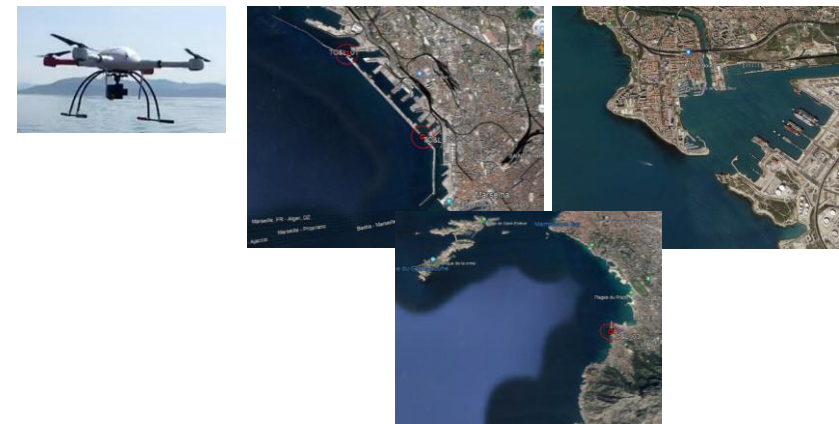

Spain (Strait of Gibraltar) 13/7 until 22/11 - 4 months

France operation (Channel) 21/4 until 7/10 - 5.5 months

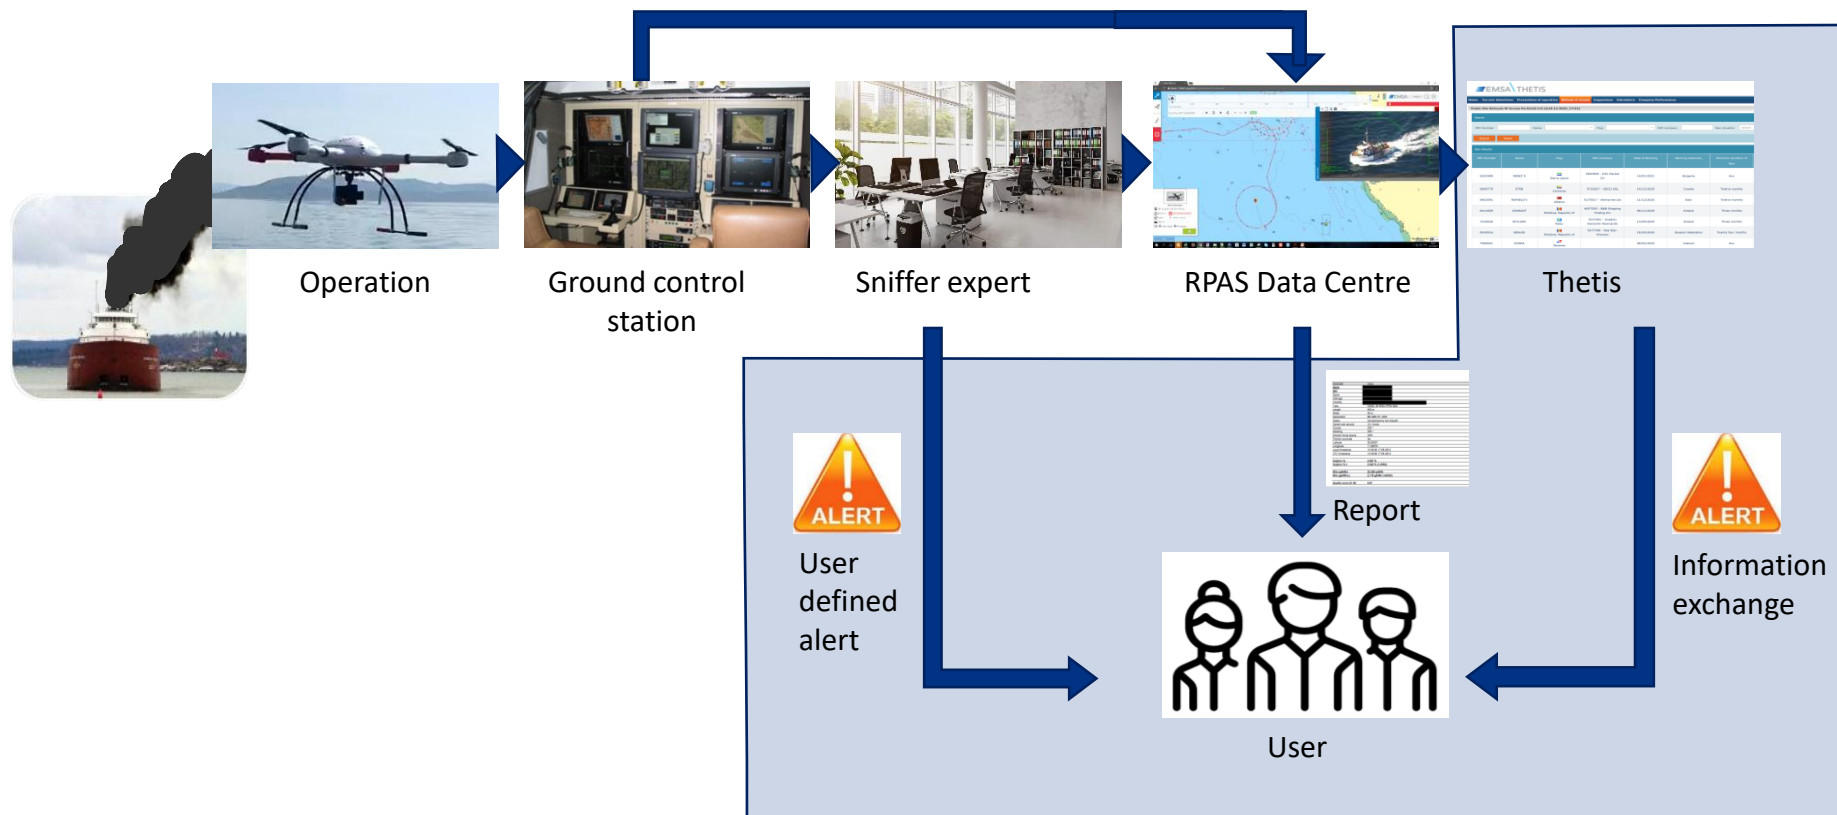

France (Port of Marseille - 3 locations) 27/09 until 23/12 - 3 months

RPAS reporting and alerting

- Emission Report generated after any measurement
- Sulphur content, accuracy and the measured vessel
- Information is shared with THETIS-EU
- Alert of a potential non- compliant vessel

Sensors on RPAS are prepared for operations

- Sensitivity ready for operations inside SECA areas (limit 0.10%)

What could be done on the RPAS side

- Perform measurements before and after to analyse the effectiveness of new SECA areas. This approach is dependent on several factors:
 - Request from Member States
 - Clear definition of the area of monitoring (before and after)
 - Budget availability
 - Ability to perform operations (in terms of permits to fly, frequencies and air space management)
- Good knowledge and data sets of non-SECA sites, which change to SECA area (change of limit from 0.50% to 0.10%)
 - France (Port of Marseille)
 - Spain (Gibraltar strait)
- Also data sets for comparison already within SECA area
 - France (Channel)
 - German (Baltic Sea)

The Safemed Project 2017-2022

- **Training sessions on MARPOL Annex VI:**
 - Regional training on MARPOL Annex VI
 - Training on MARPOL Annex VI for Israel
 - Training on MARPOL Annex VI for Tunisia
- **Workshops and seminars on sulphur emissions and MARPOL Annex VI:**
 - Meeting on awareness of the Sulphur Regulation on the margins of MEPC 74
 - Regional workshop on Ratification and Effective Implementation of MARPOL Annex VI
 - Regional workshop on Sulphur Regulation for Mediterranean Countries
- **TIER (Transposition, Implementation, and Enforcement following the Ratification of International Conventions):**
 - gap analysis in the ratification of Annex VI provided to Algeria, Lebanon, Libya, Morocco, Tunisia

The Black and Caspian Sea Project:

- 10 portable detectors were provided to Turkey

SAFEMED V Action plan:

- the ratification and transposition of MARPOL Annex VI in Egypt and Lebanon
- the transposition of MARPOL Annex VI in Tunisia
- on request support can be provided for the ratification and transposition of MARPOL Annex VI in Algeria, Israel and Libya.

Thank you for your attention
